

Testimonials

"Many thanks for the report. Happy to know nothing more than some good grass fertilizer is required. Now I can get to work. All very professional Dave and happy to have met you". **GD, Kent, 2021**

"I thought you might like to know that your analysis and suggested remedy turned out to be spot on. As soon as we received your report we added the right nutrients to the soil, with a second dose being given two weeks later.

The result is that the hedge has now changed colour, turning a much darker, glossier green and losing the sickly yellow leaves. Also, there is a lot more growth appearing everywhere. Thank you so much". **JK, Staffordshire, 2021**

"Thank you so much for that. Really enlightening, easy to read and informative report. I will be sure to recommend you to my keen gardener friends". **VS, Cornwall, 2021**

*"Thank you, that's brilliant!
That explains the lack of diversity and stunted woodland planting here.
Thank you so much".* **SB, Dartmoor, 2021**

*"I have received the Report and very happy with its set out.
Very professional, easy to read and implement".* **JC, Sunderland, 2021**

Testimonials

"Wow -Thanks. Never thought I would get excited about soil!
It felt more like the findings from an archaeological dig! The whole thing is brilliant, but I especially like what to and what not to plant section. It will give me confidence when buying plants and avoid expensive disappointments!
Knowing what to put on the soil as well - brilliant. Great piece of work".

PG, Dorset, 2021

"Ah, thank you, the Report looks brilliant". **AB, South Devon, 2021**

"Dave has provided me with an excellent service, and after service. Having read his report he then had to answer all my rather stupid questions! I don't have much to compare his service with but it struck me he is reasonably priced and you get more than expected. So excellent value all round. Highly recommended". **CP, Dorset, 2021**

"Quick, easy and very comprehensive with lots of advice for our project, really pleased with the results - thanks!" **LH, Hertfordshire, 2021**

"Got the testing done for our new garden, which has an old history. I'd highly recommend it - all very thorough and scientific, but with the science explained! Soil values are friendly (of course!), and super-efficient, from the samples to the report. And it turns out a soil analysis report makes much more interesting and easy reading than I would have expected! I've no gardening experience, and now I have a nice set of personalised instructions to get me started. The information is well summarised for quick reference and explained in full if you want to go deeper.

Testimonials

There are also visuals to help (people like me) along. You get sound, practical recommendations for what to do, as well as a list of plants to avoid and plants that will work well. I'm now feeling much less daunted by the whole thing - I'm really glad I've got this done before embarking on the (hopefully!) great adventure that is gardening!" **SE, France, 2020**
